

## PIC Release 3.6.3 Summary - Released September 14, 2002

No.	SIR	Submodule	Issue Description
1	MTC00884	Form 50058 - Reports	To develop User Interface for Detailed Report on Family Self Sufficiency (FSS)
2	MTC00885	Form 50058 - Reports	FSS Report COM- Component need to be registered in COM+
3	MTC01212	Form 50058 - Submission	Form 50058 Submission - Creation Of Filename Code Change
4	MTC01213	Form 50058 - Submission	Form 50058 Submission - Creation Of Filename Code Change
5	MTC01191	Form 50058 - Reports	Create and populate a new table that will contain the FSS details of the FSS portion of the SEMAP Report.
6	MTC01207	Form 50058 - Submission	Create a new table that will contain all the submission errors generated. Create and populated a new table that will contain all the submission error codes and descriptions.
7	MTC01214	Form 50058 - Submission	Prevent duplicate naming of uploaded files by creating a unique contraint on the column filename of p113pt_upload_ticket.
8	MTC01206	Form 50058 - Submission	Develop a data fix to solve the issue described in the following e-mail exchanges. We discovered that the code was not handling roll back for an exception. As a result, sometimes, the record which was moved successfully to the history database but was not being deleted from the current database and the new Form 50058 was not being updated either. Any other 58 for that record submitted later on, causes a primary key violation while moving the record to history db, as the record in the current already exists in the history database. The code has been corrected to perform appropriate roll back
9	MTC01163	Form 50058 - Submission	Form 50058 Submission - Modify HTML Error Report to show option of Fatal Errors and Warning
10	MTC01169	Form 50058 - Submission	To check the unit status for "RMI" on any new admission or change of unit. The record should be rejected if the status is "RMI" as the unit is marked for demo/ dispo. (To support future release of demo-dispo module.)
11	MTC01218	Form 50058 - Submission	To correct the code so that for Type of Actions 8, 10, 11 and 13, the check on Effective Date of Action is omitted. The check "a record with later effective date exists" need not be done for the above Types of Actions. Also the Effective Date on Type of Action 13 should be updated in the database.
12	MTC01219	Form 50058 - Submission	To correct error code 4382 of Field 7d
13	MTC01204	Form 50058 - AID	In the Alternate Id receipt, first name and last name are reversed.
14	MTC01188	Form 50058 - Viewer	The SSN starting with a zero are not getting displayed in the Issuance and Expiration of Vouchers List. It needs to be checked whether these SSN values are being passed as integers or strings from the Search page and should be changed to strings if passed

## PIC Release 3.6.3 Summary - Released September 14, 2002

No.	SIR	Submodule	Issue Description
15	PSS01312	Annual Performance Report (APR)	In the APR submodule, Tables I and II were not sorted or ordered correctly because the "a" was painting before (above) the "1" when the order should be "1" followed by "a(b,c)". After this fix, the table and data will load correctly.
16	PSS01374	Development	In the Development submodule, the get unit status history list table displays the approval status entry below the submission status entry. After this fix, the Approval entry should appear above (chronologically prior to) the Submission entry.
17	PSS01363	Housing Authority	<i>Housing Authority Baseline:</i> After this release, all Housing Authority DLLs in production will have source code version information recorded, and the source code version will be baselined in PVCS.
18	PSS01379	PHDEP	<i>PHDEP Baseline:</i> After this release, all PHDEP DLLs in production will have source code version information recorded, and the source code version will be baselined in PVCS.
19	PSS01261	Reference	In the Reference submodule, a bug in SQL Server 2000 causes errors to return if the page checks for RETURN_VALUE after invoking a stored procedure. After this fix, data will be successfully stored in the database and no errors will occur.
20	PSS01359	Reference	In the Reference submodule, the stored procedures update the 'last_update_user_id' and 'creation_user_id' database tables with the current SQL user id (e.g. pic_comuser) instead of the current PIC user_id. After this fix, all of the ASPs in the submodule will pass the PIC user_id to the stored procedures so that the system will log the appropriate ID in the two tables.
